

Chukwuemeka “Chuks” Okorie

Backend Developer (C# / .NET / SQL)

Lagos, Nigeria · +234 812 3456 789 · chuks.okorie@gmail.com · linkedin.com/in/chuks-okorie · github.com/chuksokorie

SUMMARY

Detail-focused Backend Developer with 2 years’ professional experience building and operating secure, high-performance web APIs and backend systems. Strong background in ASP.NET Core, SQL Server, cloud deployment (Azure), message-based architectures, and production troubleshooting. Proven record of reducing latency, improving reliability, and delivering features on Agile teams.

TECHNICAL SKILLS

- Languages: C#, SQL, T-SQL, JavaScript (basic)
- Frameworks & Platforms: ASP.NET Core, Web API, Entity Framework Core, Dapper
- Databases: SQL Server, PostgreSQL (basic), Redis (caching)
- Messaging & Integration: RabbitMQ, Azure Service Bus, RESTful APIs, OAuth/JWT
- Cloud & DevOps: Azure App Services, Azure SQL, CI/CD (GitHub Actions), Docker (basic)
- Monitoring & Tools: Application Insights, Prometheus (familiar), ELK/structured logging, Postman, Swagger
- Practices: SOLID, Clean Architecture, CQRS (practical experience), Unit & Integration Testing

PROFESSIONAL EXPERIENCE

Dibatech — Senior Backend Developer

Lagos, Nigeria | June 2020 – Present (current)

- Lead backend engineer on payment reconciliation and transaction services used by internal and external partners; designed resilient REST APIs with ASP.NET Core that handle ~10k requests/day.
- Re-architected a legacy transaction processing flow into an event-driven pipeline using RabbitMQ and background workers — reduced peak processing time by 45%.
- Introduced Redis caching for account lookups and session data; improved API response times for critical endpoints by 30%.
- Implemented role-based access control and JWT authentication across microservices; collaborated with security team to remediate OWASP issues and pass penetration tests.
- Improved observability: standardized structured logging, exported custom metrics, and set up alerts for critical failure modes; reduced mean time to detect (MTTD) incidents by

~50%.

- Mentored 3 junior backend engineers; ran code reviews and advocated for stricter unit / integration test coverage.

Ilekwe Systems — Backend Engineer

Abuja, Nigeria | Jan 2018 – May 2020

- Built and maintained RESTful APIs for an education-tech platform serving schools and parents; designed data models and optimized queries to reduce average page load time.
- Implemented stored procedures and optimized slow queries—reduced several critical query latencies by up to 60%.
- Integrated third-party payment gateway for school fee payments, handling reconciliation and failure scenarios.

NYSC / Systems Support (Intern) — Blue Algorithm Technology

Jos, Nigeria | Jul 2016 – Dec 2017

- Provided server and network support; assisted with deployments and troubleshooting; wrote scripts to automate routine tasks.

SELECTED PROJECTS

- Banking Transactions API (Dibatech) — Designed clean architecture API to support deposits, withdrawals, transfers with idempotency guarantees and proper transaction boundaries. Added caching and rate limiting for high-traffic endpoints.
- School Management Microservice (Ilekwe Systems) — Built student and course services with EF Core, migrations, DTO mapping and secure file upload support.
- Billing Reconciliation Tool — Console and Web utilities to reconcile third-party payment provider records against internal ledgers; reduced reconciliation drift by 98%.

ACHIEVEMENTS

- Reduced critical API latency by 30% via caching and SQL tuning.
- Cut production incidents requiring rollbacks by introducing feature flags and canary releases.
- Regularly achieved 99.9% uptime for services owned.

EDUCATION

Higher National Diploma (HND), Computer Science — Federal Polytechnic, Auchi (2015)

Professional Certifications: Microsoft Learn — Azure Fundamentals (in progress / pursuit listed as “in progress”)
